## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-11 and 16-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Throughout the claims 1-11 and 16-18, the amended limitation “outer supporting **bracket**” is not described in the specification.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 15 is rejected under 35 U.S.C. 102(b) as being anticipated by Lechler (U.S. Patent 5104271).

Lechler disclose a mounting device for securing a control unit comprising: an outer supporting structure (3) formed from a non-resilient material, the outer supporting structure having an outer threaded portion (6) formed integrally therewith and extending therefrom that is

Art Unit: 3726

adapted to be attached to a component (10); an inner supporting structure (2) that has a threaded inner portion (5) formed integrally therewith and extending therefrom that is adapted to be received in a corresponding threaded bore formed in the control unit (9); and a layer of resilient material (4) disposed between a second end of the outer supporting structure that is opposite from the first end and the inner structure, the layer of resilient material forming an insulative barrier between the outer supporting structure and the inner structure to prevent any direct contact therebetween whereby the resilient material absorbs noise and vibrations (Fig 1).

It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham, 2 USPQ 2d 1647 (1987)*.

5. Claims 1-11 and 16-18 rejected under 35 U.S.C. 102(b) as being anticipated by Iwamoto et al. (U.S. Patent 5669232).

Regarding Claim(s) 1-11 and 16-18, since the amendment filed 8/16/06 contains the new matter “outer supporting **bracket**” the Examiner maintains the rejection made on 7/23/06.
